

Aditya Bhaskar Sharma

Senior Product Engineer (Full Stack) | React, TypeScript, PHP | AI-Augmented Product Builder

✉ adityabhaskarsharma@gmail.com ☎ +91 7018447933 📍 India 🌐 [Live Portfolio](#)

Summary

Product-focused full-stack engineer with 13 years experience building and scaling web applications and SaaS products end-to-end. Experienced in owning features from idea to production, working closely with product and business teams, and delivering user-facing systems with measurable impact.

I work as an AI-augmented developer: I use AI to ship faster, but the real value is the judgment layer — catching hallucinated APIs, spotting security and performance issues AI misses, and making architectural calls that hold up at scale. Writing code in a language is no longer the skill that matters; depth of understanding, code review instincts, and the ability to correct and direct AI output is what separates a senior engineer from a generator.

Experience

Independent Product Engineer

Remote

Senior Full Stack Engineer

2022 - Present

- Delivered production systems used by real users across multiple client projects and SaaS tools
- Improved performance, stability, and maintainability of long-running products through continuous iteration
- Owned end-to-end development of production web applications from concept to deployment, including architecture, frontend, backend, and cloud infrastructure
- Designed and shipped React + TypeScript applications with focus on performance, scalability, and maintainable component systems
- Worked directly with product requirements to translate ideas into shipped features and production systems
- Managed production reliability including debugging, incident resolution, and iterative improvements
- Integrated AI tooling (Claude, Copilot) into the development workflow — using it for velocity on boilerplate and refactors while applying senior-level review for API correctness, security boundaries, and architectural fit

LazyCodeLab

India/Remote

Founder

2019-Present

- Led end-to-end delivery of multiple SaaS and web products, owning architecture, development, and deployment
- Worked closely with clients to define product requirements and convert them into scalable technical solutions
- Built and scaled frontend-heavy applications with strong focus on UX, performance, and business impact
- Managed distributed team and drove technical decisions across projects
- Built WP Snippets AI as an example of AI-first product design — integrating modern AI workflows into a legacy WordPress ecosystem with careful attention to performance and extensibility

Projects

WP Snippets AI

2025 - Present

AI powered WordPress plugin integrating modern JavaScript UI with scalable PHP backend architecture designed for extensibility and performance.

CSS & JavaScript Toolbox

2016 - Present

Improved and scaled the plugin by stabilizing legacy codebase, shipping new features, and implementing ongoing security and performance updates while collaborating directly with the product owner.

Skills

🧠 AI-Augmented Engineering

Claude, GitHub Copilot, prompt engineering, AI code review, hallucination detection Expert

📱 Backend Development

PHP, REST APIs, API-first system design, C# (Unity tooling basic), SQL, Agile, Scrum, Jira

🔧 Engineering Practices

AWS, CI/CD, System Design, Component Architecture, Git

🖥️ Frontend Engineering

React, TypeScript, JavaScript, SPA Architecture, HTML5, CSS3

📄 WordPress Architecture

Plugin Development, Gutenberg, WooCommerce, Headless WordPress

Education

Chandigarh University

Civil Engineering

Engineering graduate with strong analytical foundations and a self-driven transition into full stack software engineering.

Bachelor of Engineering • 7.2 CGPA

PB, India • 2012-2016

Languages

English

Fluent

Hindi
